

# 5 Tips for Spring Openings

1

Remove all debris and water from solid pool cover before trying to remove it. Make sure the cover is clean and dry before you store it for the season.

2

Before you start your pump, make sure you remove debris from the pool, make any necessary repairs to the system, and the water level is midway up the skimmer.

3

If algae is present in the pool, brush walls and shock pool (for best results, run pump to circulate for 60 minutes). turn off pump and apply **Revive!® START UP / CLEAN UP** using a garden hose. Wait 24-48 hours for debris to settle to pool bottom then slowly vacuum to waste. Thoroughly clean pool filter.

4

Bring a water sample of elbow depth circulated pool water to your Authorized Dealer for testing and balance water as follows:

Calcium Hardness: 300-400 ppm

pH: 7.2 - 7.6

Total Alkalinity: 80-120 ppm

5

Use double the recommended dose of **E-Z POOL®** for the first application in Spring. Then follow the dosage chart found on the pail to maintain your pool with a simple once-a-week application. Take a water sample to your Authorized Dealer monthly for testing.
