

Instructions for adding API's Pepper product to the DataMate 10 Software or PoolCorp 10 Software by LaMotte Company.

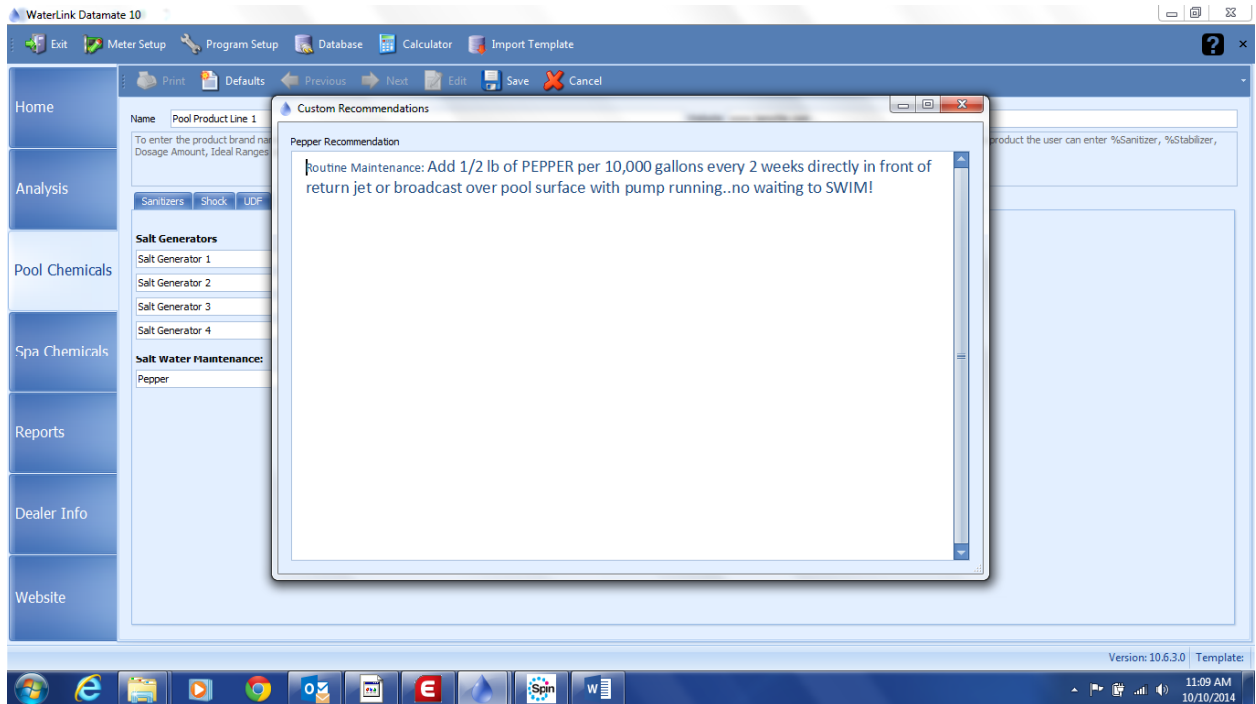

1. On the Home screen click the **Pool Chemicals** button on the left side of the screen.

2. Once you click the Pool Chemicals button the Pool Chemicals section will appear, now click the **Salt Generator** Tab.

- Next click the **Edit** button and type or copy in the product name PEPPER in the **Salt Water Maintenance** field. Next click the “**R**” symbol for **Recommendation** next to the Salt Water Maintenance field and type or copy in this text: **Routine Maintenance: Add 1/2 lb of PEPPER per 10,000 gallons every 2 weeks directly in front of return jet or broadcast over pool surface with pump running.. no waiting to SWIM!**

- Once you have typed or copied the text about PEPPER into the Recommendation section press the **X** to **exit** the Recommendation section. Next Click the **Save** button and your information has now been saved.

5. When you run a test in the New Pool Test entry section make sure to **check** the box for **Salt Water Maintenance**, so the PEPPER recommendation appears on the printout.
