

Frequently Asked Questions PEPPER E-Z Solution

- **How long will the 30-gallon tank treat my pool?**
 - There are many different sizes and volumes of pools a few common sizes are listed below:

Pool Size	Days a 30-Gallon tank will treat
▪ 10,000 gallons	~100 days
▪ 15,000 gallons	~66 days
▪ 20,000 gallons	~50 days
▪ 25,000 gallons	~ 40 days
- **The Chemical feed pump is moving.... but very slowly is this correct?**
 - Yes, once the feed rate is set in the feed pump it moves just as fast to ensure a consistent feed over a 24-hour period.
- **I'm having a party this weekend and am expecting a lot of swimmers can I bump up the amount I'm feeding?**
 - Sure, you can manually add PEPPER granular by broadcasting into the pool when no swimmers are present or you can simply hit the prime button (looks like a fast forward button) on the chemical feed pump, it will run full speed for approx. 60 seconds adding additional PEPPER Solution to your pool.
- **Can I refill my 30-Gallon tank before it's empty?**
 - Absolutely, depending on how much solution is left in the tank will determine how much E-Z POOL you will add:

~Gallons in Tank	PEPPER to add
▪ 7.5 gal (1/4 full tank)	3.0 lb.
▪ 15 gal (1/2 full tank)	2.0 lb.
▪ 21 gal (3/4 full tank)	1. lb.
 - Then top off the tank with fresh water
- **Do I need to adjust my calcium to 350ppm+ with the E-Z Solution?**
 - There is less of a need to adjust calcium to 350 ppm+ when using the E-Z Solution, as it is constantly injecting a steady amount of PEPPER all day.

- **What do I do with my pump & tank when I close up / winterize my pool?**
 - Unplug from the outlet and disconnect both hoses attached to the chemical feed pump by loosening the compression nuts and remove the chemical feed pump from the tank by pressing in the tab at the back and pulling up on the pump.
 - Store pump out of the elements for the winter.
 - For Safe Keeping remove the nuts from the chemical feed tubing and reattach the nuts to the chemical feed pump.
 - Any remaining PEPPER Solution in the tank can be poured directly into your pool- it will help to keep the water quality over the time the pool is closed.
 - Rinse out the Tank before storage.
